Professional Summary

Mid-Level Flutter Engineer with a proven track record of architecting and delivering 15+ production-ready applications across Android, iOS, and Desktop. Specialized in leveraging Clean Architecture and Bloc/Cubit to build scalable, high-performance enterprise solutions, ranging from real-time ride-hailing apps to hardware-integrated POS systems. Adept at bridging the gap between complex backend integrations and seamless, user-centric mobile experiences that drive business operations.

Key Achievements

- Shipped and maintained 15+ cross-platform applications on Google Play and the App Store across the healthcare, e-commerce, and logistics sectors.
- Engineered a full Flutter Desktop POS system (Alreda POS) with direct hardware integration (thermal printers via USB/BLE) and ZATCA tax API validation to process secure daily transactions.
- Developed real-time geolocation and tracking workflows for a ride-hailing platform (Entalak) using WebSockets and Google Maps integration, supporting concurrent drivers and live operational monitoring.
- Architected secure, backend-validated payment and subscription systems across multiple platforms (SMLE Gate, Al-Saifco) using Paymob, driving seamless and reliable user checkouts.
- Standardized app architecture across enterprise projects using Clean Architecture and the Repository Pattern, significantly reducing onboarding time for new developers and minimizing production bugs.

Technical Skills

Core Dart, Flutter (Android, iOS, Desktop)	State Management BLoC, Cubit, Provider	Architecture & Patterns Clean Architecture, Repository Pattern, Modular Architecture, Offline-First Design
Backend & APIs REST APIs, Dio, GraphQL, Supabase Edge Functions (Deno)	Real-Time & Databases WebSockets, Pusher, Supabase (PostgreSQL, Realtime), Firebase, SQLite, Hive, SharedPreferences	Maps & Geolocation Google Maps Integration, Live Tracking, Route Visualization
Hardware & Payments POS Thermal Printers (USB, Wi-Fi, BLE), Paymob Integration, Subscription Workflows	Tools & UI/UX Git, GitHub, CI/CD, Flutter DevTools, Material Design, Responsive UI, Localization/Multi-language	

Professional Experience

SIT Company , Flutter Developer Developed and maintained enterprise Flutter applications used in corporate environments including HR platforms, medical systems, and service platforms. Worked closely with backend engineers to integrate large-scale APIs, subscription systems, and real-time services. Implemented scalable architecture patterns using Cubit/Bloc and Repository Pattern.	2024 – Present Cairo
Sada for IT , Flutter Developer Built two applications for tracking pilgrims during the Hajj season, featuring role-based access control (pilgrim, guide, supervisor).	07/2024 – 10/2024 Freelancer
Flutter Developer Freelance projects	12/2023 – Present

Selected Projects

[SMLE Gate](#) , Medical Exam Simulation & Subscription Platform

- Engineered a production-grade medical exam engine using Flutter and Cubit, featuring persistent background timers and local session restoration for uninterrupted exam simulations.
- Implemented secure backend-driven subscription workflows with Paymob integration, peer-to-peer gifting, advanced analytics, and real-time performance comparison systems.

[Android](#)  - [iOS](#) 

Entalak, Real-Time Ride-Hailing & Delivery Platform

- Developed a scalable multi-role platform (Driver, Customer, Supervisor) with real-time request broadcasting via Pusher and live driver tracking using map services.
- Architected the complete ride lifecycle workflow including geolocation-based booking, navigation handling, trip management, dynamic pricing estimation, and live operational monitoring.

[SIT HR](#) , Enterprise Workforce Management System

- Built a complex enterprise HR platform supporting Employee, Team Leader, HR, and CEO roles with strict device-ID-based authentication controls.
- Developed GPS-based attendance tracking, leave management workflows, employee analytics dashboards, and automated notification systems to streamline HR operations.

[Android](#)  - [iOS](#) 

[Alreda POS](#) , Offline-First Restaurant Desktop System

- Developed a Flutter Desktop POS system with offline-first architecture and automatic background synchronization to ensure uninterrupted operations during connectivity loss.
- Integrated ZATCA e-invoicing APIs and direct thermal POS printing for fully compliant restaurant invoicing workflows.

[Tebyan School](#) , Full-Stack Online Tutoring Platform

- Architected and developed a full-stack educational platform using Flutter and Supabase including Auth, Realtime services, and Deno Edge Functions.
- Implemented real-time student-teacher communication with file sharing, automated content moderation, Firebase notifications, and timezone-aware lesson scheduling.

[Book Exchange](#) , Peer-to-Peer Community Marketplace

- Built a location-aware book trading platform using Supabase authentication, realtime infrastructure, and image-enabled live messaging.
- Implemented reputation-based trust mechanisms and automated push notification workflows triggered through Supabase Edge Functions.

[Al-Jehani Fuel Stations](#) , POS & Thermal Invoicing System

- Delivered a specialized Android invoicing system for fuel stations with direct integration into the Saudi ZATCA e-invoicing infrastructure.
- Engineered custom thermal invoice layouts and direct POS printer communication to optimize high-volume station operations.

[SDC Lab](#) , Medical Lab Results Tracking App

- Developed a secure healthcare application enabling patients to access and filter medical records using Cubit and Repository Pattern architecture.
- Integrated Flutter WebViews to dynamically render HTML lab reports generated from an internal Oracle-based hospital system.

[Android](#)  - [iOS](#) 

[Felosy](#) , Clean Architecture Personal Finance App

- Architected a scalable personal finance application using Clean Architecture and Bloc/Cubit for structured financial state management.
- Engineered an automated recurring transaction scheduler with real-time balance recalculation and dynamic financial analytics.

My Tasks, Microsoft To Do Inspired Productivity Platform.

- Architected a highly responsive Flutter productivity application inspired by Microsoft To Do, featuring adaptive mobile/tablet layouts and advanced task organization workflows.
- Implemented complex recurring task scheduling logic supporting custom repetition rules, drag-and-drop task reordering, swipe-based interactions, productivity analytics, and real-time local persistence using Clean Architecture and Cubit state management.

Haneyah [↗](#) , Food Ordering & Delivery Application.

- Developed a scalable Flutter food ordering platform featuring authentication workflows, OTP verification, cart management, checkout processing, order tracking, and multilingual support.
- Implemented modular feature-based architecture using Bloc/Cubit, Dio, GoRouter, Firebase notifications, and secure local storage to deliver a maintainable and production-ready ordering experience.

Al-Saifco [↗](#) , E-Commerce Mobile Application

- Developed a Flutter-based e-commerce platform featuring product catalog browsing, shopping cart management, address handling, order tracking, and online payment workflows.

SIT Services [↗](#) , Corporate Services Application

- Developed a corporate service management platform with API-driven workflows, request handling systems, form validation, and rule-based chatbot integration.

[Android](#) [↗](#) - [IOS](#) [↗](#)

TMC Queue [↗](#) , Digital queue system for hospitals to manage ticket reservations efficiently.

- Developed an Android kiosk system enabling patients to generate queue tickets through specialization and doctor selection workflows.
- Integrated multilingual support and USB/Wi-Fi thermal printing for hospital self-service environments.

YaMakan [↗](#) , Multi-language travel & activities discovery app.

- Developed a multilingual tourism discovery application enabling users to explore destinations, activities, and guided tours across Egyptian cities.

MyTranslateBook, AI-powered text extraction & translation from images/PDFs.

- Built an AI-powered mobile application for extracting and translating text from images and PDF documents.

Rifad & Al-Rifadah, Hajj transport management apps with real-time monitoring.

- Developed transportation management applications supporting operational monitoring and coordination workflows during Hajj activities.

 Certifications

Flutter & Dart Development [↗](#)

Tharwat Samy, Udemy (2024)

Flutter & Dart: Basics to Advanced [↗](#)

Abdallah Yassein, Udemy (2025)

Master Git & GitHub [↗](#)

Tharwat Samy, Udemy (2024)

Flutter clean Architecture [↗](#)

Usama Elgendy, Udemy (2026)

 Education

Bachelor of Arts, Philosophy, Fayoum University

2014 – 2018
